

THE DRESCHER COMBUSTION AIR VENT

*...economically improves
the efficiency of your
conventional fireplace.*

It's an age-old problem. Homeowners need an air supply to use their fireplaces. But, they may pay dearly for it by drawing from their own household heat for fireplace operation. Costly and unnecessary.

Effectively remedied by the
DURABLE CAST IRON
DRESCHER **COMBUSTION AIR VENT**

1. THE DRESCHER **AIR VENT** efficiently draws cold air from outside the home and generates the proper environment for combustion, using **UNHEATED, FREE AIR.**
2. Like a damper, it controls air flow, and continuously feeds combustion air into the fireplace.

THE QUESTION:

*How do I
economically bring
exterior air into
my fireplace?*

THE ANSWER:

THE **NEW**

DRESCHER

**COMBUSTION
AIR VENT**

**FOR MASONRY
FIREPLACES...**
